UNIVERSITY OF SETIF 1 - ALGERIA

YRAC 2017

Richard Brauer " A tremendous effort has been made by mathematicians for more than a century to clear up the chaos in group theory. Still, we cannot answer some of the simplest questions." Following the context of **M. de Falco – F. de Giovanni – C. Musella, (2014)**, the notion of a "large group" can be formalized in the following way :

Definition

Let \mathcal{X} be a class of groups. Then \mathcal{X} is said to be a class of large groups if it satisfies the following conditions :

1 If a group G contains an \mathcal{X} -subgroup, then G belongs to \mathcal{X} .

Following the context of **M. de Falco – F. de Giovanni – C. Musella, (2014)**, the notion of a "large group" can be formalized in the following way :

Definition

Let \mathcal{X} be a class of groups. Then \mathcal{X} is said to be a class of large groups if it satisfies the following conditions :

If a group G contains an X-subgroup, then G belongs to X.
If N is a normal subgroup of an X-group G, then at least one of the groups N and G/N belongs to X.

Following the context of **M. de Falco – F. de Giovanni – C. Musella, (2014)**, the notion of a "large group" can be formalized in the following way :

Definition

Let \mathcal{X} be a class of groups. Then \mathcal{X} is said to be a class of large groups if it satisfies the following conditions :

- **1** If a group G contains an \mathcal{X} -subgroup, then G belongs to \mathcal{X} .
- If N is a normal subgroup of an X-group G, then at least one of the groups N and G/N belongs to X.
- \bigcirc No finite cyclic group lies in \mathcal{X} .

イロト イポト イヨト イヨト

Definition

- A group is said to have finite rank r if every finitely generated subgroup can be generated by r elements, and r is the least positive integer with this property. If no such integer r exists then we say that the group has infinite rank.
- Groups of infinite rank form a class of large groups.

• $C_{p^{\infty}}$, \mathbb{Q} are locally cyclic groups, so they have rank 1.

イロト イロト イヨト イヨト

- $C_{p^{\infty}}$, **Q** are locally cyclic groups, so they have rank 1.
- Every polycyclic group and every Černikov group has finite rank.

- $C_{p^{\infty}}$, **Q** are locally cyclic groups, so they have rank 1.
- Every polycyclic group and every Černikov group has finite rank.
- A soluble minimax group has finite rank.

- $C_{p^{\infty}}$, **Q** are locally cyclic groups, so they have rank 1.
- Every polycyclic group and every Černikov group has finite rank.
- A soluble minimax group has finite rank.
- Any free non-abelian has infinite rank.

Let \mathcal{X} be a class of large groups, and let \mathcal{P} be a property pertaining to subgroups of a group.

Definition

 ${\mathcal X} \text{ controls } {\mathcal P} \text{ if and only if the following condition is satisfied :}$

• *G* is any X-group and all X-subgroups of *G* have the property *P*, then *P* holds for all subgroups of *G*.

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

- The class of cyclic groups controls periodicity.
- The class of finitely generated groups controls commutativity.

- Černikov (1990) proved that any *X*-group of finite rank is a finite extension of a locally soluble subgroup.
- A group *G* is strongly locally graded if every section of *G* is a *X*-group. In particular, every strongly locally graded is an *X*-group.
- Strongly locally graded groups is a larger class of generalized soluble groups, which is closed with respect to subgroups and homomorphic images, and contains all locally (soluble-by-finite) groups.

イロト イポト イヨト イヨト 二日

Many authors studied groups of infinite rank whose proper subgroups of infinite rank belong to the group theoretical property \mathcal{P} . In particular :

 M. R. Dixon - M. J. Evans - H. Smith, (1999), they proved that the class of groups of infinite rank controls the property " nilpotent of class *c* (*c* ≥ 0)" in the universe of strongly locally graded. Thus :

Theorem

 If G is a strongly locally graded group of infinite rank such that each proper subgroup of infinite rank of G is is nilpotent of class c (c ≥ 0), then so is G.

<ロ> (日) (日) (日) (日) (日)

• In the same paper M. R. Dixon - M. J. Evans - H. Smith, proved also that the class of groups of infinite rank controls the property "locally nilpotent" in the universe of strongly locally graded groups. Thus :

Theorem

• Let G be a strongly locally graded group of infinite rank whose proper subgroups of infinite rank are locally nilpotent. Then so is G.

イロト イポト イヨト イヨト

• M. De Falco - F. De Giovanni - C. Musella - N. Trabelsi, (2014), they proved that the class of groups of infinite rank controls the property "has locally finite commutator subgroup" in the universe of strongly locally graded groups. Thus :

Theorem

• Let G be a strongly locally graded group of infinite rank whose proper subgroups of infinite rank are (locally finite)-by-abelian. Then , then so is G.

イロト イポト イヨト イヨト

• De Giovanni, Trombetti, (2014), they proved that the class of groups of infinite rank controls the property "(locally finite)-by-(locally nilpotent)" in the universe of strongly locally graded. Thus :

Theorem

• Let G be a strongly locally graded group of infinite rank whose proper subgroups of infinite rank are (locally finite)-by-(locally nilpotent). Then so is G.

- 4 回 2 4 U = 2

• These results shows that the subgroups of infinite rank of a (generalized) soluble group of infinite rank have the power to influence the structure of the whole group and to force also the behaviour of the subgroups of finite rank of *G*.

- These results shows that the subgroups of infinite rank of a (generalized) soluble group of infinite rank have the power to influence the structure of the whole group and to force also the behaviour of the subgroups of finite rank of *G*.
- In fact, it has been proved that, for some choices of the group theoretical properties \mathcal{P} , if *G* is a group in which all subgroups of infinite rank satisfy the property \mathcal{P} , then the samehappens also to the subgroups of finite rank.

The types of the group theoretical properties *P* that we are interested in here are : *NX* (resp. *N_cX*, *ZAC*), and their duals *XN* (resp. *XN_c*, *CZA*), where *N*, *N_c*, *ZA*, *C*, are respectively, the class of nilpotent, nilpotent of class *c* (*c* ≥ 1 an integer), hypercentral, Černikov, and *X* is any class contained in the class of finite rank groups.

Does the class of groups of infinite rankcontrols the group theoretical propert *P* in the universe of strongly locally graded groups? In other words, if *G* is a group of infinite rank whose proper subgroups of infinite rank belong to *P*. Then all proper subgroups of *G* in *P*? Does *G* itself belong to *P*?

- Does the class of groups of infinite rankcontrols the group theoretical propert *P* in the universe of strongly locally graded groups? In other words, if *G* is a group of infinite rank whose proper subgroups of infinite rank belong to *P*. Then all proper subgroups of *G* in *P*? Does *G* itself belong to *P*?
- The description of minimal non-*P* groups for a certain group class *P* can be considered as the first step in the investigation of groups of infinite rank. We shall say that a group *G* is minimal non-*P* if it is not *P*-group, but all its proper subgroups belong to *P*.

イロト イポト イヨト イヨト

Main results

We denote by $(\mathcal{X})^*$ the class of groups in which every proper non- \mathcal{X} subgroup has finite rank.

We have shown that the class of infinite rank groups controls the property XN (resp. XN_c) in the universe of strongly locally graded groups, where X is a class of group such that X ⊆ R and SX = X (i.e, X is closed under taking subgroups). Thus :

Main results

We have shown that the class of infinite rank groups controls the property XN (resp. XN_c) in the universe of strongly locally graded groups, where X is a class of group such that X ⊆ R and SX = X (i.e, X is closed under taking subgroups). Thus :

Theorem

If G is a strongly locally graded group of infinite rank such that each proper subgroup of G is in the class (XN)* (resp. (XN_c)*), then each proper subgroup of G is an XN-group (resp. XN_c-group).

イロト イポト イヨト イヨト

• The preceding results admits the following consequences :

Let *G* be a strongly locally graded group of infinite rank.

- By combining the result of **N. Trabelsi A. Zitouni** and the previous result, we have : if *G* belong to the class $(\mathcal{MN})^*$, then *G* is a \mathcal{MN} -group or \mathcal{MNN} without maximal subgroups.
- By combining the result of **N. Trabelsi A. Zitouni** and the previous result, we have : if *G* belong to the class $(\mathcal{MN}_c)^*$, then so is *G*.

We have shown that the class of groups of infinite rank controls the property "X" in the universe of strongly locally graded groups, where X satisfy ZA ⊆ X ⊆ LN. Thus :

Theorem

If G is a strongly locally graded group of infinite rank such that $G \in (\mathcal{X})^*$. Then every proper subgroup of G is an \mathcal{X} -group.

As a consequences of the preceding result, we have the following :

• Let *G* be a strongly locally graded group of infinite rank. If all proper subgroups of infinite rank of *G* are in the class Gruenberg (resp. normaliser condition), then all proper subgroups of *G* are Gruenberg (resp. normaliser condition).

• We have shown that the class of infinite rank groups controls the property "CZA" in the universe of strongly locally graded groups. Thus :

Theorem

If G is a strongly locally graded group of infinite rank such that $G \in (CZA)^*$, then all proper subgroups of G are CZA-groups.

• We proved that the class of infinite rankgroups controls the property "*ZAC*" in the universe of strongly locally graded groups. Thus :

Theorem

If G is a strongly locally graded group of infinite rank such that $G \in (ZAC)^*$, then all proper subgroups of G are ZAC-groups.

• We proved that the class of infinite rank groups controls the property \mathcal{NC} (*resp.* \mathcal{NPF} , \mathcal{NM}) in the universe of strongly locally graded groups. Thus :

Theorem

If G is a strongly locally graded group of infinite rank such that G belong to $(\mathcal{NC})^*$ (resp. $(\mathcal{NPF})^*$, $(\mathcal{NM})^*$), then all proper subgroups of G are \mathcal{NC} (resp. \mathcal{NPF} , \mathcal{NM})-groups.

▶ < E > < E >

As a consequences : Let *G* be a strongly locally graded group of infinite rank.

- Using **A. O. Asar (2000)** result, we get : if *G* belong to the class $(\mathcal{NC})^*$, then so is *G*.
- Using **N. Trabelsi A. Zitouni** result, we get : if *G* belong to the class $(\mathcal{NM})^*$, then so is *G*.
- S. Franciosi F. De Giovanni Y. P. Sysac, (1999), result, shows that a locally (polycyclic-by-finite) group whose proper subgroups belong to the class \mathcal{NPF} , then either *G* is \mathcal{NPF} or locally finite countable group.
- Locally graded whose proper subgroups are \mathcal{NPF} . (Future work).

イロト イポト イヨト イヨト

• By using the result of **B. Bruno - F. Napolitani,(2004)**, we proved the following :

Theorem

If G is a strongly locally graded group of infinite rank such that $G \in (\mathcal{N}_c \mathcal{C})^*$, then so is G.

Future works :

- The class of groups of infinite rank controls the property $\mathcal{N}_c \mathcal{PF}$ (resp. $\mathcal{N}_c \mathcal{M}$) in the universe of strongly locally graded groups.
- Locally graded group whose proper subgroups are $\mathcal{N}_c \mathcal{PF}$ (resp. $\mathcal{N}_c \mathcal{M}$).
