Polynomial Identities Main Problems Classifying up to PI equivalence: the codimensions

(日)

## **Polynomial identities**

- $X := \{x_1, x_2, \ldots\}$  is a countable set and F is a field
- *F*(*X*) is the free associative algebra over *F* generated by *X*

#### Definition

An element  $f(x_1, ..., x_s) \in F\langle X \rangle$  is a *polynomial identity* for an *F*-algebra *A* if  $f(a_1, ..., a_s) = 0_A$  for all  $a_i \in A$ . If an *F*-algebra *A* satisfies a non-trivial polynomial identity, then we say that *A* is a *Pl algebra*.

Examples

Polynomial Identities Main Problems Classifying up to PI equivalence: the codimensions

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

• A *commutative* algebra is PI since it satisfies  $[x_1, x_2] := x_1 x_2 - x_2 x_1$ 

Examples

Polynomial Identities Main Problems Classifying up to PI equivalence: the codimensions

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

- A *commutative* algebra is PI since it satisfies  $[x_1, x_2] := x_1x_2 x_2x_1$
- A *nilpotent* algebra of degree *n* is PI since it satisfies  $x_1x_2 \cdots x_n$

Polynomial Identities Main Problems Classifying up to PI equivalence: the codimensions

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

## Examples

- A *commutative* algebra is PI since it satisfies  $[x_1, x_2] := x_1x_2 x_2x_1$
- A *nilpotent* algebra of degree *n* is PI since it satisfies  $x_1x_2 \cdots x_n$
- A *finite dimensional* algebra of dimension *n* is PI since it satisfies

$$\operatorname{St}_{n+1}(x_1, x_2, \ldots, x_{n+1}) := \sum_{\sigma \in S_{n+1}} \operatorname{sgn}(\sigma) x_{\sigma(1)} \cdots x_{\sigma(n+1)}$$

Polynomial Identities Main Problems Classifying up to PI equivalence: the codimensions

## Examples

- A *commutative* algebra is PI since it satisfies  $[x_1, x_2] := x_1x_2 x_2x_1$
- A *nilpotent* algebra of degree *n* is PI since it satisfies  $x_1x_2 \cdots x_n$
- A *finite dimensional* algebra of dimension *n* is PI since it satisfies

$$\operatorname{St}_{n+1}(x_1, x_2, \dots, x_{n+1}) := \sum_{\sigma \in S_{n+1}} \operatorname{sgn}(\sigma) x_{\sigma(1)} \cdots x_{\sigma(n+1)}$$

• The *Grassmann algebra* on a countable dimension F-vector space (char  $F \neq 2$ ) is PI

A first line of research

The characteristic zero case and Specht's Problem

#### Theorem [Kemer, 1991]

Let F be a field of characteristic zero and A a PI algebra. Then

 $\mathsf{Id}(A) = \langle f_i \, | \, f_i \in F \langle X \rangle \ f_i \text{ multilinear} \rangle_T.$ 

Furthermore Id(A) is finitely generated (*Specht's Problem*).

So it is enough to consider

 $\oplus_{n\in\mathbb{N}}(P_n\cap \mathsf{Id}(A)),$ 

where 
$$P_n := \operatorname{span}_F \{ x_{\tau(1)} \cdots x_{\tau(n)} | \tau \in S_n \}.$$

Polynomial Identities Main Problems Classifying up to PI equivalence: the codimensions

## Polynomial identities for matrices

#### $\operatorname{Id}(M_n(F))$

• 
$$Id(M_2(F)) = \langle [[x_1, x_2]^2, x_3], St_4 \rangle_T$$

Given a *T*-ideal (set) *S* of  $F\langle X \rangle$ , the class of all algebras *A* such that  $S \subseteq Id(A)$  for all  $f \in S$  is called *the variety*  $\mathcal{V} = \mathcal{V}(S)$  *determined by S*. Let us write  $Id(\mathcal{V}) = S$ . An algebra *A* generates  $\mathcal{V}$  if  $Id(A) = Id(\mathcal{V})$  (write  $\mathcal{V} = var(A)$ ).

#### Main Goal

To classify varieties

Polynomial Identities Main Problems Classifying up to PI equivalence: the codimensions

## **Codimension Sequence**

#### Definition [Regev, 1972]

Let A be an F-algebra. The non-negative integer

$$c_n(A) := \dim_F \frac{P_n}{P_n \cap \operatorname{Id}(A)}$$

is said to be the *n-th codimension* of the algebra A.

 The sequence (c<sub>n</sub>(A))<sub>n∈ℕ</sub> depends on Id(A) rather than A, thus it is constant on PI-equivalence classes and can therefore be used as an invariant.

The exponent of a PI algebra Minimal Varieties

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

## The exponent of a PI algebra

#### Theorem [Regev, 1972]

If the algebra A satisfies an identity of degree  $d \ge 1$ , then

$$c_n(A) \leq (d-1)^{2n}$$
  $n \geq 1$ .

The exponent of a PI algebra Minimal Varieties

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

## The exponent of a PI algebra

#### Theorem [Regev, 1972]

If the algebra A satisfies an identity of degree  $d \ge 1$ , then

$$c_n(A) \leq (d-1)^{2n}$$
  $n \geq 1$ .

#### Definition

Let *A* be a PI algebra. Then *the exponent* of *A* is (if there exists)

$$\exp(A) := \lim_{m \to +\infty} \sqrt[m]{c_m(A)}.$$

The exponent of a PI algebra Minimal Varieties

## The exponent of a PI algebra

#### Theorem [Regev, 1972]

If the algebra A satisfies an identity of degree  $d \ge 1$ , then

$$c_n(A) \leq (d-1)^{2n}$$
  $n \geq 1$ .

#### Definition

Let A be a PI algebra. Then *the exponent* of A is (if there exists)

$$\exp(A):=\lim_{m\to+\infty}\sqrt[m]{c_m(A)}.$$

#### Conjecture [Amitsur, '80]

For any PI algebra A, exp(A) exists and is an integer.

The exponent of a PI algebra Minimal Varieties

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

## Existence of the exponent

#### Theorem [Giambruno-Zaicev, 1998-1999]

Let *A* be a PI algebra. Then the exponent of *A* exists and is an integer.

• They provide a method to compute it.

## Importance of the exponent in classifying varieties

- The most important feature of the exponent is that it provides an integral scale allowing to measure the growth of any variety.
- Now we start by distributing all varieties into layers according to their exponent.
- Let S ⊆ F ⟨X⟩. It could be that if we consider a subset
  S ⊂ T ⊆ F ⟨X⟩ we get a strictly smaller variety with a strictly smaller exponent.
- If this always happens,  $\mathcal{V}(S)$  is called a *minimal variety*.

The exponent of a PI algebra Minimal Varieties

## **Minimal varieties**

#### Definition

A variety  $\mathcal{V}$  is *minimal* of exponent  $d \ge 2$  if  $\exp(\mathcal{V}) = d$  and  $\exp(\mathcal{U}) < d$  for any proper subvariety  $\mathcal{U} \subset \mathcal{V}$ .

#### Theorem [Giambruno-Zaicev, 2003]

Let  $\mathcal{V}$  be a variety of algebras of exponent  $d \ge 2$ . The following statements are equivalent:

- (i)  $\mathcal{V}$  is minimal;
- (ii)  $Id(\mathcal{V})$  is the product of verbally prime *T*-ideals;

(iii)  $\mathcal{V} = var(Gr(A))$ , where A is a suitable *minimal* superalgebra and Gr(A) is its Grassmann envelope.

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

## Graded algebras

#### Definition

Let G be a group and F be a field. An (associative) F-algebra A is called G-graded if

$$A=\oplus_{g\in G}A^{(g)},$$

where  $A^{(g)}$  is an *F*-supaspace of *A* and  $A^{(g)}A^{(h)} \subseteq A^{(gh)}$  for every  $g, h \in G$ . When  $G = \mathbb{Z}_2$ , *A* is said to be a *superalgebra*.

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

## • The Grassmann algebra

$$Gr = \langle 1, e_1, e_2, \dots | e_i e_j = -e_j e_i \text{ for all } i, j \ge 1 \rangle$$

so a basis is given by

$$B := \{1, e_{i_1} \cdots e_{i_k} \mid 1 \le i_1 < i_2 < \ldots < i_k\}.$$

Set

Examples

$$Gr^{(0)} := \operatorname{span}\{e_{i_1} \cdots e_{i_{2k}} \mid 1 \le i_1 < \ldots < i_{2k}, k \ge 0\},$$
  
 $Gr^{(1)} := \operatorname{span}\{e_{i_1} \cdots e_{i_{2k+1}} \mid 1 \le i_1 < \ldots < i_{2k+1}, k \ge 0\}.$   
Then  $Gr = Gr^{(0)} \oplus Gr^{(1)}.$  In particular,  $Gr^{(0)} = Z(Gr).$ 

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

## Elementary grading on $M_n(F)$

Let G be a group and (g<sub>1</sub>,...,g<sub>n</sub>) ∈ G<sup>n</sup>. Consider the algebra M<sub>n</sub>(F) graded by

$$\begin{pmatrix} g_1^{-1}g_1 = 1_G & g_1^{-1}g_2 & g_1^{-1}g_3 & \dots & g_1^{-1}g_n \\ g_2^{-1}g_1 & g_2^{-1}g_2 = 1_G & g_2^{-1}g_3 & \dots & g_2^{-1}g_n \\ \vdots & \vdots & & \vdots \\ g_n^{-1}g_1 & g_n^{-1}g_2 & \dots & \dots & g_n^{-1}g_n = 1_G \end{pmatrix}$$

This grading on  $M_n(F)$  is called *elementary*.

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

## Graded polynomial identities

#### • G is a group

•  $F\langle X \rangle^G$  is the free associative *G*-graded algebra of countable rank over *F* (here, if  $G = \{g_1, g_2, \ldots\}$ , the set *X* decomposes as  $X = \bigcup_{i=1}^{s} X^{(g_i)}$ , where  $X^{(g_i)} = \{x_1^{(g_i)}, x_2^{(g_i)}, \ldots\}$ )

#### Definition

An element  $f(x_1^{(g_1)}, \ldots, x_{t_1}^{(g_1)}, \ldots, x_1^{(g_s)}, \ldots, x_{t_s}^{(g_s)}) \in F\langle X \rangle^{g_r}$  is a *graded polynomial identity* for the *G*-graded algebra *A* if  $f(a_1^{(g_1)}, \ldots, a_{t_1}^{(g_1)}, \ldots, a_1^{(g_s)}, \ldots, a_{t_s}^{(g_s)}) = 0_A$  for all  $a_i \in A$ .

The graded version of Specht's Problem

Let us consider the  $T_G$ -ideal of graded polynomial identities of a G-graded algebra A

$$\mathsf{Id}_G(A) := \{ f | f \in F \langle X \rangle^G \quad f \equiv 0 \text{ on } A \}.$$

#### Theorem [Aljadeff-Kanel Belov, 2010]

Let F be a field of characteristic zero and A be a PI algebra graded by a finite group G. Then

 $\mathsf{Id}_{G}(A) = \langle f_{i} | f_{i} \in F \langle X \rangle^{gr} f_{i} \text{ multilinear} \rangle_{T_{G}}.$ 

Furthermore  $Id_G(A)$  is finitely generated (*Graded Specht's Problem*).

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

・ コット (雪) ( 小田) ( コット 日)

## Graded codimensions

Assume that char F = 0. As in the ungraded case, it is enough to consider the spaces of multilinear *G*-graded polynomials in the variables  $x_1^{(g_{i_1})}, \ldots, x_n^{(g_{i_n})}$ 

$$\mathcal{P}_n^G := \operatorname{Span}\{x_{\sigma(1)}^{(g_{i_1})}\cdots x_{\sigma(n)}^{(g_{i_n})}|\ \sigma\in \mathcal{S}_n \quad g_{i_1},\ldots,g_{i_n}\in G\}.$$

#### Definition

The non-negative integer

$$\mathcal{C}^G_n(\mathcal{A}) := \dim_{\mathcal{F}} rac{\mathcal{P}^G_n}{\mathcal{P}^G_n \cap \operatorname{Id}_G(\mathcal{A})}$$

is said to be the *n-th G-graded codimension* of the algebra A.

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$

## The graded problem

## Classify the minimal varietes of PI algebras graded by a finite group G of fixed graded exponent

#### Definition

A variety  $\mathcal{V}^G$  of *G*-graded PI algebras is said to *minimal* of graded exponent *d* if  $\exp^G(\mathcal{V}^G) = d$  and  $\exp^G(\mathcal{U}^G) < d$  for every proper subvariety  $\mathcal{U}^G \subset \mathcal{V}^G$ .

## **Motivations**

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

To construct a theory which generalizes that of ordinary polynomial identities.

#### **Motivations**

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

- To construct a theory which generalizes that of ordinary polynomial identities.
- The additional graded structure and realted objects may provide significant information on quite general objects. For instance, Kemer in his fundamental work [Transl. Math. Monograph, vol. 87, Amer. Math. Soc., Providence, RI, 1991] proved that for any non-trivial variety there exists a finite-dimensional superalgebras A (on an extension of F) such that the T-ideal of the variety coincides with the T-ideal of polynomial identities of Gr(A).

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_{D}$

#### Generators of minimal supervarieties

#### Theorem [Di Vincenzo-S., 2012]

Let  $\mathcal{V}^{\mathbb{Z}_2}$  be a variety PI superalgebras of finite basic rank. If  $\mathcal{V}^{\mathbb{Z}_2}$  is minimal of  $\mathbb{Z}_2$ -graded exponent  $d \ge 2$ , then  $\mathcal{V}^{\mathbb{Z}_2} = \operatorname{var}^{\mathbb{Z}_2}(B)$ , where *B* is a suitable minimal superalgebra.

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

## Minimal superalgebras

#### Definition [Giambruno-Zaicev, 2003]

Let *F* be an algebraically closed field. An *F*-superalgebra *A* is called *minimal* if it is finite dimensional and  $A = A_{ss} + J$  where

(1) 
$$A_{ss} = A_1 \oplus \cdots \oplus A_n$$
 with  $A_1, \ldots, A_n$  simple superalgebras;

(2) there exist homogeneous elements
 *w*<sub>12</sub>,..., *w*<sub>n-1,n</sub> ∈ J<sup>(0)</sup> ∪ J<sup>(1)</sup> and minimal graded idempotents *e*<sub>1</sub> ∈ *A*<sub>1</sub>,..., *e*<sub>n</sub> ∈ *A*<sub>n</sub> such that

$$e_i w_{i,i+1} = w_{i,i+1} e_{i+1} = w_{i,i+1}, \qquad i = 1, \ldots, n-1$$

and

$$W_{12}W_{23}\cdots W_{n-1,n}\neq 0;$$

(3)  $w_{12}, \ldots, w_{n-1,n}$  generate *J* as two-sided ideal of *A*.

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

## Simple Superalgebras

• 
$$M_{k,l} := \begin{pmatrix} A & B \\ C & D \end{pmatrix}$$
, where  $k \ge l \ge 0, k \ne 0, A \in M_k$ ,  
 $D \in M_l, B \in M_{k \times l}$  and  $C \in M_{l \times k}$ , endowed with the grading  
 $M_{k,l}^{(0)} := \begin{pmatrix} A & 0 \\ 0 & D \end{pmatrix}$  and  $M_{k,l}^{(1)} := \begin{pmatrix} 0 & B \\ C & 0 \end{pmatrix}$ ;

•  $M_m(F \oplus tF)$ , where  $t^2 = 1$  with grading  $(M_m, tM_m)$ ,

where, for any pair of positive integers *m* and *s*, the symbol  $M_{m \times s}$  means the *F*-vector space of all rectangular matrices with *m* rows and *s* columns, and  $M_m := M_{m \times m}$ .

Minimal varieties vs minimal supervarieties

 Giambruno-Zaicev [Adv. Math. 174 (2003), 310–323] proved that a variety of finite basic rank is minimal if, and only if, it is generated by an upper block triangular matrix algebra UT(d<sub>1</sub>,...,d<sub>n</sub>) and

 $\mathsf{Id}(UT(d_1,\ldots,d_n))=\mathsf{Id}(M_{d_1})\cdots\mathsf{Id}(M_{d_n})$ 

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

Minimal varieties vs minimal supervarieties

 Giambruno-Zaicev [Adv. Math. 174 (2003), 310–323] proved that a variety of finite basic rank is minimal if, and only if, it is generated by an upper block triangular matrix algebra UT(d<sub>1</sub>,...,d<sub>n</sub>) and

 $\mathsf{Id}(UT(d_1,\ldots,d_n))=\mathsf{Id}(M_{d_1})\cdots\mathsf{Id}(M_{d_n})$ 

• Minimal superalgebras in which all the summands of the semisimple part are simple graded simple generate minimal supervarieties, but in general they do not generate the same supervariety not even if they have the same graded components  $A_1, \ldots, A_n$ . Hence we cannot hope that the  $T_2$ -ideal of superidentities of these minimal superalgebras is factorable.

・ロト ・ 同 ・ ・ ヨ ・ ・ ヨ ・ うへつ

#### The case with two graded simple summands

#### Theorem [Di Vincenzo-S., 2012]

Let  $A = A_{ss} + J$  be a minimal superalgebra such that  $A_{ss} = A_1 \oplus A_2$ . Then  $Id_{\mathbb{Z}_2}(A) = Id_{\mathbb{Z}_2}(A_1) \cdot Id_{\mathbb{Z}_2}(A_2)$  if one of the following conditions is satisfied:

- at least one between A<sub>1</sub> and A<sub>2</sub> is non-simple as algebra;
- $A_1$  and  $A_2$  are both simple  $\mathbb{Z}_2$ -simple and there exists  $1 \le i \le 2$  such that  $A_i = M_{k_i,k_i}$ .

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

#### The case with two graded simple summands

#### Theorem [Di Vincenzo-S., 2012]

Let  $A = A_{ss} + J$  be a minimal superalgebra such that  $A_{ss} = A_1 \oplus A_2$ . Then  $Id_{\mathbb{Z}_2}(A) = Id_{\mathbb{Z}_2}(A_1) \cdot Id_{\mathbb{Z}_2}(A_2)$  if one of the following conditions is satisfied:

- at least one between A<sub>1</sub> and A<sub>2</sub> is non-simple as algebra;
- $A_1$  and  $A_2$  are both simple  $\mathbb{Z}_2$ -simple and there exists  $1 \le i \le 2$  such that  $A_i = M_{k_i,k_i}$ .

#### Theorem [Di Vincenzo-S., 2012]

Let  $A = A_{ss} + J$  be a minimal superalgebra such that  $A_{ss} = A_1 \oplus A_2$ . Then the supervariety generated by A is minimal of graded exponent dim<sub>*F*</sub>( $A_1 \oplus A_2$ ).

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

On the structure of minimal superalgebras

It has been shown that a minimal superalgebra
 A = (A<sub>1</sub> ⊕ ... ⊕ A<sub>n</sub>) + J has the following vector space decomposition:

$$A = \bigoplus_{1 \le i \le j \le n} A_{ij}$$

where  $A_{11} := A_1, \ldots, A_{nn} := A_n$  and, for all i < j,

$$\mathbf{A}_{ij} := \mathbf{A}_i \mathbf{w}_{i,i+1} \mathbf{A}_{i+1} \cdots \mathbf{A}_{j-1} \mathbf{w}_{j-1,j} \mathbf{A}_j.$$

Moreover  $J = \bigoplus_{i < j} A_{ij}$  and  $A_{ij}A_{kl} = \delta_{jk}A_{il}$ , where  $\delta_{jk}$  is the Kronecker delta.

• For every  $1 \le k < l \le n$  set

$$A^{(k,l)} := \bigoplus_{k \le i \le j \le l} A_{ij},$$

which is a minimal superalgebra as well.

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

## A factorization property

#### Theorem [Di Vincenzo-da Silva-S., 2016]

Let  $A = A_{ss} + J$  be a minimal superalgebra. If  $A_{ss} = A_1 \oplus \cdots \oplus A_n$  and there exists  $1 \le h \le n$  such that  $A_1, \ldots, A_h$  are non-simple graded simple and  $A_{h+1}, \ldots, A_n$  are simple graded simple algebras, then

$$\mathsf{Id}_{\mathbb{Z}_2}(A) = \mathsf{Id}_{\mathbb{Z}_2}(A_1) \cdots \mathsf{Id}_{\mathbb{Z}_2}(A_h) \cdot \mathsf{Id}_{\mathbb{Z}_2}(A^{(h+1,n)})$$

On the other hand, if h < n and  $A_1, \ldots, A_h$  are simple graded simple and  $A_{h+1}, \ldots, A_n$  are non-simple graded simple algebras, then

$$\mathsf{Id}_{\mathbb{Z}_2}(A) = \mathsf{Id}_{\mathbb{Z}_2}(A^{(1,h)}) \cdot \mathsf{Id}_{\mathbb{Z}_2}(A_{h+1}) \cdots \mathsf{Id}_{\mathbb{Z}_2}(A_n).$$

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

・ロト ・ 同 ・ ・ ヨ ・ ・ ヨ ・ うへつ

## Another positive result

#### Theorem [Di Vincenzo-da Silva-S., 2016]

Let  $A = A_{ss} + J$  be a minimal superalgebra. If  $A_{ss} = A_1 \oplus \cdots \oplus A_n$  and there exists  $1 \le h \le n$  such that  $A_1, \ldots, A_h$  are non-simple graded simple and  $A_{h+1}, \ldots, A_n$  are simple graded simple algebras (or vice versa), then the supervariety generated by A is minimal of graded exponent dim<sub>*F*</sub>( $A_{ss}$ ).

The Graded Objects Minimal varieties of PI superalgebras The case  $G = \mathbb{Z}_p$ 

## A crucial example

Consider  $R := UT_6$  endowed with the  $\mathbb{Z}_2$ -grading induced by the automorphism  $\phi$  (of order 2) defined on  $E_{ij}$  by

 $\phi(E_{ij}) := E_{\rho(i),\rho(j)}, \qquad \rho := (12)(34)(56).$ 

Take the subalgebra A of R having as a linear basis the set

$$\mathcal{B}_{A} := \{ E_{11} + E_{22}, E_{33}, E_{44}, E_{55} + E_{66}, E_{13}, E_{24}, E_{35}, E_{46}, E_{15}, E_{26} \},$$

which is homogeneous. Its Wedderburn-Malcev decomposition is  $A_{ss} = A_1 \oplus A_2 \oplus A_3$ , where

• 
$$A_1 = \langle E_{11} + E_{22} \rangle \cong F (e_1 := E_{11} + E_{22});$$

• 
$$A_2 = \langle E_{33}, E_{44} \rangle \cong F \oplus tF$$
, where  $t^2 = 1$ , with grading  $(F, tF) (e_2 := E_{33} + E_{44});$ 

•  $A_3 = \langle E_{55} + E_{66} \rangle \cong F \ (e_3 := E_{55} + E_{66})$ 

and Jacobson radical  $J(A) = \langle E_{13}, E_{24}, E_{35}, E_{46}, E_{15}, E_{26} \rangle$  is generated as an ideal by the homogeneous elements

$$w_{12} := E_{13} + E_{24}, \qquad w_{23} := E_{35} + E_{46} + E_{46}$$

Introduction and Motivations Minimal varieties Minimal Varieties of Graded PI Algebras The case  $G = \mathbb{Z}_p$ 

Consider  $S := UT_4$  endowed with the  $\mathbb{Z}_2$ -grading induced by the automorphism  $\psi$  defined by

 $\psi(\mathbf{E}_{ij}) := \mathbf{E}_{\sigma(i),\sigma(j)}, \qquad \sigma := (\mathbf{23}).$ 

Take the subalgebra B of S having as a linear basis the set

 $\mathcal{B}_B := \{E_{11}, E_{22}, E_{33}, E_{44}, E_{12}, , E_{13}, E_{24}, E_{34}, E_{14}\}.$ 

B is a minimal superalgebra with graded simple summands of  $B_{ss}$ , where

• 
$$B_1 = \langle E_{11} \rangle \cong F (e_1 := E_{11});$$

•  $B_2 = \langle E_{22}, E_{33} \rangle \cong F \oplus tF$ , where  $t^2 = 1$ , with grading (F, tF) ( $e_2 := E_{22} + E_{33}$ );

•  $B_3 = \langle E_{44} \rangle \cong F$  ( $e_3 := E_{44}$ )

and Jacobson radical  $J(B) = \langle E_{12}, E_{13}, E_{24}, E_{34}, E_{14} \rangle$  generated as an ideal by the homogeneous elements

$$w_{12} := E_{12} + E_{13}, \qquad w_{23} := E_{24} + E_{34}.$$

## A characterization theorem

#### Theorem [Di Vincenzo-da Silva-S., 2017]

Let *F* be a field of characteristic zero and *G* a group of prime order *p*. A variety of *G*-graded PI-algebras of finite basic rank is minimal of *G*-exponent *d* if, and only if, it is generated by a *G*-graded algebra  $UT_G(A_1, \ldots, A_m)$  satisfying  $\dim_F(A_1 \oplus \cdots \oplus A_m) = d$ .
