

# On Pronormalizers in Finite Groups

*(a joint work with M. Brescia and M. Trombetti)*

---

**Ernesto Ingrosso**

Università degli Studi di Napoli Federico II

## Definition

Let  $p$  be a prime,  $G$  a group and  $P$  a  $p$ -subgroup of  $G$ . A subgroup  $S$  is said to be a  *$p$ -Sylowizer* of  $P$  in  $G$  if  $S$  is maximal in the set of all subgroups of  $G$  containing  $P$  as a Sylow  $p$ -subgroup.

## Definition

Let  $p$  be a prime,  $G$  a group and  $P$  a  $p$ -subgroup of  $G$ . A subgroup  $S$  is said to be a  *$p$ -Sylowizer* of  $P$  in  $G$  if  $S$  is maximal in the set of all subgroups of  $G$  containing  $P$  as a Sylow  $p$ -subgroup.

The Sylowizers were introduced by Gaschütz in 1971.

 W. Gaschütz, *Sylowisatoren*, Math. Z. **122** (1971), 319–320.

## Definition

Let  $p$  be a prime,  $G$  a group and  $P$  a  $p$ -subgroup of  $G$ . A subgroup  $S$  is said to be a  $p$ -Sylowizer of  $P$  in  $G$  if  $S$  is maximal in the set of all subgroups of  $G$  containing  $P$  as a Sylow  $p$ -subgroup.

The Sylowizers were introduced by Gaschütz in 1971.

 W. Gaschütz, *Sylowisatoren*, Math. Z. **122** (1971), 319–320.

- $P$  can have more than one  $p$ -Sylowizer.

## Definition

Let  $p$  be a prime,  $G$  a group and  $P$  a  $p$ -subgroup of  $G$ . A subgroup  $S$  is said to be a  $p$ -Sylowizer of  $P$  in  $G$  if  $S$  is maximal in the set of all subgroups of  $G$  containing  $P$  as a Sylow  $p$ -subgroup.

The Sylowizers were introduced by Gaschütz in 1971.

 W. Gaschütz, *Sylowisatoren*, Math. Z. **122** (1971), 319–320.

- $P$  can have more than one  $p$ -Sylowizer. If  $P = \{1\}$ , then every maximal  $p'$ -subgroup is a  $p$ -Sylowizer of  $P$  in  $G$ .

## Definition

Let  $p$  be a prime,  $G$  a group and  $P$  a  $p$ -subgroup of  $G$ . A subgroup  $S$  is said to be a  $p$ -Sylowizer of  $P$  in  $G$  if  $S$  is maximal in the set of all subgroups of  $G$  containing  $P$  as a Sylow  $p$ -subgroup.

The Sylowizers were introduced by Gaschütz in 1971.

 W. Gaschütz, *Sylowisatoren*, Math. Z. **122** (1971), 319–320.

- $P$  can have more than one  $p$ -Sylowizer. If  $P = \{1\}$ , then every maximal  $p'$ -subgroup is a  $p$ -Sylowizer of  $P$  in  $G$ .
- Every  $p$ -subgroup of  $G$  has only one  $p$ -Sylowizer if and only if  $G$  has a normal Sylow  $p'$ -subgroup.

### Theorem (Gaschütz)

Let  $p$  be a prime,  $G$  a finite soluble group and  $P$  a  $p$ -subgroup of  $G$ . If  $P$  is normal in a Sylow  $p$ -subgroup of  $G$ , then the  $p$ -Sylowizers of  $P$  in  $G$  are conjugate.

### Theorem (Gaschütz)

Let  $p$  be a prime,  $G$  a finite soluble group and  $P$  a  $p$ -subgroup of  $G$ . If  $P$  is normal in a Sylow  $p$ -subgroup of  $G$ , then the  $p$ -Sylowizers of  $P$  in  $G$  are conjugate.

If  $P = \{1\}$ , then the Hall  $p'$ -subgroups are conjugate.

### Theorem (Gaschütz)

Let  $p$  be a prime,  $G$  a finite soluble group and  $P$  a  $p$ -subgroup of  $G$ . If  $P$  is normal in a Sylow  $p$ -subgroup of  $G$ , then the  $p$ -Sylowizers of  $P$  in  $G$  are conjugate.

If  $P = \{1\}$ , then the Hall  $p'$ -subgroups are conjugate.

In  $G = \text{GL}(2, 3)$ ,  $P = \left\langle \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix} \right\rangle$  has non-conjugate 2-Sylowizers.

## Definition

Let  $G$  be a group and  $U$  a subgroup of  $G$ .  $U$  is said to be *pronormal* in  $G$  if  $U$  and  $U^x$  are conjugate in  $\langle U, U^x \rangle$  for each  $x \in G$ .

## Definition

Let  $G$  be a group and  $U$  a subgroup of  $G$ .  $U$  is said to be *pronormal* in  $G$  if  $U$  and  $U^x$  are conjugate in  $\langle U, U^x \rangle$  for each  $x \in G$ .

The concept of pronormality was introduced by P. Hall in his lectures in Cambridge.

First results on pronormal subgroups appeared in

 J.S. Rose, *Finite soluble groups with pronormal system normalizers*, Proc. London Math. Soc. **17** (1967), 447–469

## Definition

Let  $G$  be a group and  $U$  a subgroup of  $G$ .  $U$  is said to be *pronormal* in  $G$  if  $U$  and  $U^x$  are conjugate in  $\langle U, U^x \rangle$  for each  $x \in G$ .

The concept of pronormality was introduced by P. Hall in his lectures in Cambridge.

First results on pronormal subgroups appeared in

 J.S. Rose, *Finite soluble groups with pronormal system normalizers*, Proc. London Math. Soc. **17** (1967), 447–469

- Normal subgroups are pronormal;

## Definition

Let  $G$  be a group and  $U$  a subgroup of  $G$ .  $U$  is said to be *pronormal* in  $G$  if  $U$  and  $U^x$  are conjugate in  $\langle U, U^x \rangle$  for each  $x \in G$ .

The concept of pronormality was introduced by P. Hall in his lectures in Cambridge.

 J.S. Rose, *Finite soluble groups with pronormal system normalizers*, Proc. London Math. Soc. **17** (1967), 447–469

- Normal subgroups are pronormal;
- Maximal subgroups are pronormal;

## Definition

Let  $G$  be a group and  $U$  a subgroup of  $G$ .  $U$  is said to be *pronormal* in  $G$  if  $U$  and  $U^x$  are conjugate in  $\langle U, U^x \rangle$  for each  $x \in G$ .

The concept of pronormality was introduced by P. Hall in his lectures in Cambridge.

First results on pronormal subgroups appeared in

 J.S. Rose, *Finite soluble groups with pronormal system normalizers*, Proc. London Math. Soc. **17** (1967), 447–469

- Normal subgroups are pronormal;
- Maximal subgroups are pronormal;
- Sylow  $p$ -subgroups in finite groups are pronormal.

Let  $G$  be a group and  $U$  a pronormal subgroup of  $G$ . Then

- If  $U \triangleleft\triangleleft G$ , then  $U \triangleleft G$ .

Let  $G$  be a group and  $U$  a pronormal subgroup of  $G$ . Then

- If  $U \triangleleft\triangleleft G$ , then  $U \triangleleft G$ .
- If  $K \triangleleft G$  and  $U \leq K$ , then  $G = N_G(U)K$ .

Let  $G$  be a group and  $U$  a pronormal subgroup of  $G$ . Then

- If  $U \triangleleft\triangleleft G$ , then  $U \triangleleft G$ .
- If  $K \triangleleft G$  and  $U \leq K$ , then  $G = N_G(U)K$ .

### Theorem (Gaschütz)

Let  $G$  be a group,  $U$  a subgroup of  $G$  and  $K \triangleleft G$ . Then following are equivalent:

- (1)  $U$  is pronormal in  $G$ ,
- (2)  $UK$  is pronormal in  $G$  and  $U$  is pronormal in  $N_G(UK)$ .

## Definition

Let  $G$  be a group and  $U$  a subgroup of  $G$ . A subgroup  $R$  of  $G$  is said to be a *pronormalizer* of  $U$  in  $G$ , if  $R$  is maximal in set of all subgroups of  $G$  containing  $U$  as a pronormal subgroup.

## Definition

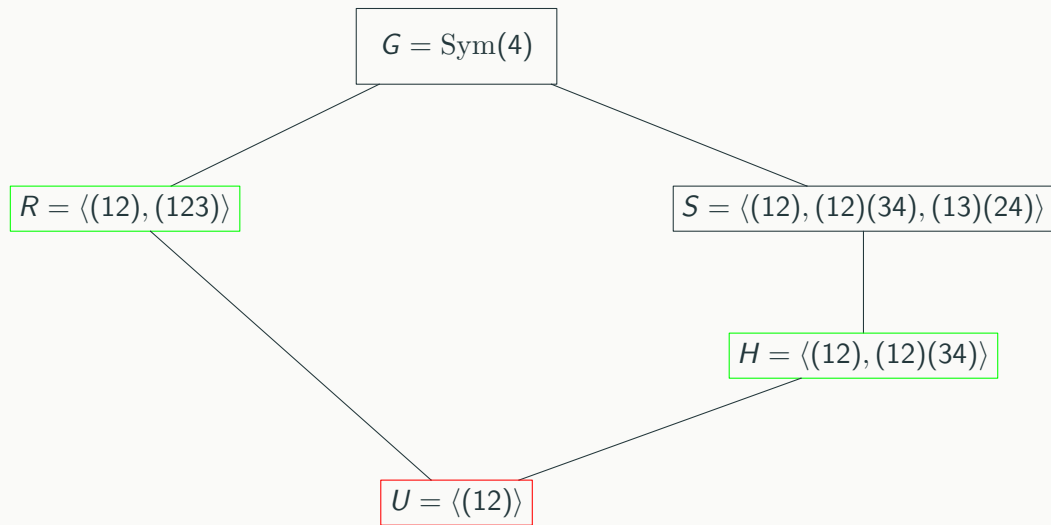

Let  $G$  be a group and  $U$  a subgroup of  $G$ . A subgroup  $R$  of  $G$  is said to be a *pronormalizer* of  $U$  in  $G$ , if  $R$  is maximal in set of all subgroups of  $G$  containing  $U$  as a pronormal subgroup.

- If  $U$  is a  $p$ -subgroup, every  $p$ -Sylowizer of  $U$  in  $G$  is contained in a pronormalizer of  $U$  in  $G$ .

## Definition

Let  $G$  be a group and  $U$  a subgroup of  $G$ . A subgroup  $R$  of  $G$  is said to be a *pronormalizer* of  $U$  in  $G$ , if  $R$  is maximal in set of all subgroups of  $G$  containing  $U$  as a pronormal subgroup.

- If  $U$  is a  $p$ -subgroup, every  $p$ -Sylowizer of  $U$  in  $G$  is contained in a pronormalizer of  $U$  in  $G$ .
- $U$  can have more than one pronormalizer.

### Remark

Let  $p$  be a prime,  $G$  a finite group and  $U$  a  $p$ -subgroup of  $G$ . If  $N$  is a normal  $p'$ -subgroup of  $G$ , then  $R$  is a pronormalizer of  $U$  in  $G$  if and only if  $R$  is a pronormalizer of  $UN$  in  $G$ .

### Remark

Let  $p$  be a prime,  $G$  a finite group and  $U$  a  $p$ -subgroup of  $G$ . If  $N$  is a normal  $p'$ -subgroup of  $G$ , then  $R$  is a pronormalizer of  $U$  in  $G$  if and only if  $R$  is a pronormalizer of  $UN$  in  $G$ .

### Remark

Let  $\pi$  be a set of primes,  $G$  a finite soluble group and  $U$  a  $\pi$ -subgroup of  $G$ . If  $N$  is a normal  $\pi'$ -subgroup of  $G$ , then  $R$  is a pronormalizer of  $U$  in  $G$  if and only if  $R$  is a pronormalizer of  $UN$  in  $G$ .

Let  $G$  be a group and  $U$  a subgroup of  $G$ .

- If  $U \triangleleft\triangleleft G$ , then  $N_G(U)$  is the only pronormalizer of  $U$  in  $G$ .

Let  $G$  be a group and  $U$  a subgroup of  $G$ .

- If  $U \triangleleft\triangleleft G$ , then  $N_G(U)$  is the only pronormalizer of  $U$  in  $G$ .
- If  $U \leq K \triangleleft G$ , and  $R$  is the only pronormalizer of  $U$  in  $K$ , then  $N_G(U)R$  is the only pronormalizer of  $U$  in  $G$ .

Let  $G$  be a group and  $U$  a subgroup of  $G$ .

- If  $U \triangleleft\triangleleft G$ , then  $N_G(U)$  is the only pronormalizer of  $U$  in  $G$ .
- If  $U \leq K \triangleleft G$ , and  $R$  is the only pronormalizer of  $U$  in  $K$ , then  $N_G(U)R$  is the only pronormalizer of  $U$  in  $G$ .

### Theorem

Let  $G$  be a group,  $U$  a subgroup of  $G$  and  $K$  a normal subgroup of  $G$ . Then

- (1) If  $U$  has only one pronormalizer  $R$  in  $G$  and  $U$  is pronormal in  $N_G(UK)$ , then  $R$  is the only pronormalizer of  $UK$  in  $G$ .
- (2) If  $UK$  has only one pronormalizer  $L$  in  $G$  and  $U$  is pronormal in  $N_L(UK)$ , then  $L$  is the only pronormalizer of  $U$  in  $G$ .

## Theorem

Let  $p$  be a prime,  $G$  a finite soluble group and  $P$  a  $p$ -subgroup of  $G$ . If  $P$  has only one pronormalizer in  $G$ , then the  $p$ -Sylowizers of  $P$  in  $G$  are conjugate.

## Theorem

Let  $p$  be a prime,  $G$  a finite soluble group and  $P$  a  $p$ -subgroup of  $G$ . If  $P$  has only one pronormalizer in  $G$ , then the  $p$ -Sylowizers of  $P$  in  $G$  are conjugate.

Recall that  $G$  is said to be *metanilpotent* if there exists a normal nilpotent subgroup  $N$  of  $G$  such that  $G/N$  is nilpotent.

- If  $G$  is a finite metanilpotent, then every  $p$ -subgroup has only one pronormalizer in  $G$  for each prime  $p$ .

## Theorem

Let  $p$  be a prime,  $G$  a finite soluble group and  $P$  a  $p$ -subgroup of  $G$ . If  $P$  has only one pronormalizer in  $G$ , then the  $p$ -Sylowizers of  $P$  in  $G$  are conjugate.

Recall that  $G$  is said to be *metanilpotent* if there exists a normal nilpotent subgroup  $N$  of  $G$  such that  $G/N$  is nilpotent.

- If  $G$  is a finite metanilpotent, then every  $p$ -subgroup has only one pronormalizer in  $G$  for each prime  $p$ .

Recall that  $G$  has a *Sylow tower* if  $G$  has a normal series of Sylow subgroups.

- If  $G$  is a finite group with a Sylow tower, then every  $p$ -subgroup has only one pronormalizer in  $G$  for each prime  $p$ .

In 1968, J. G. Thompson classified the finite minimal simple groups.

In 1968, J. G. Thompson classified the finite minimal simple groups.

If  $G$  is a finite minimal simple group, then  $G$  is isomorphic to one of the following:

- (i)  $\text{PSL}(2, 2^p)$  where  $p$  is a prime number;
- (ii)  $\text{PSL}(2, 3^p)$  where  $p$  is an odd prime;
- (iii)  $\text{PSL}(2, p)$  where  $p > 3$  is a prime such that 5 divides  $p^2 + 1$ ;
- (iv)  $\text{PSL}(3, 3)$ ;
- (v)  $\text{Sz}(2^p)$  where  $p$  is an odd prime.

## Theorem

Let  $G$  be a finite minimal simple group. Then there exists an involution of  $G$  with at least two pronormalizers.

### **Theorem**

Let  $G$  be a finite minimal simple group. Then there exists an involution of  $G$  with at least two pronormalizers.

### **Corollary**

Let  $G$  be finite group in which every 2-subgroup has only one pronormalizer, then  $G$  is soluble.

### Theorem

Let  $G$  be a finite metabelian group. Then every subgroup of  $G$  has only one pronormalizer.
